Fluid Components Introduces The 80/20 Demo Van To ODU

Want a hands-on experience with our T-slotted aluminum construction system? Then plan to attend the Demo in the Physics High Bay, room 1101 in the Physical Science building, all are invited, but Lab Techs, Researchers and Grad Students should find this very informative. See the potential of 80/20 products and get a feel for the product and accessories in action. Ask questions of our approved 80/20 Vendor. When we visit we will arrive in our 80/20 Demo Van outfitted with the 80/20 gurney. The gurney is a virtual 3D catalog of profiles, parts and accessories that allow you to get a feel for the rigidity of the extrusions... experience the effortless movement of our linear bearings... and get a sense of the strength, and modularity of our many fastening methods. Product catalogs will be available as well. No matter how big or small a venue, if you are ready to get a hands on 80/20 experience and want to learn more about our product, plan to attend the Demo on Thursday, 2/27/14 @ 1:00pm, Rm. 1101 of PSB. For more info contact: Tom Hartlove at 683-5812 or 670-1074
