

Engineering Open House - Hands on Activity

(No prior preparation required)

Rules for catapult corn hole

- Scoring:
 - One point for a bag on the board
 - Three points for a bag in the hole
 - The scoring will differ from traditional corn hole in that one teams score will not “knock out” the other teams as each team will have its own target board.
- Playing
 - The equipment used will be regulation corn hole boards and bags
 - The distance between the catapults and the boards may be varied after one teams turn has ended (the goal is accuracy, not distance)
 - One member will be assigned as the bag returner and will stand at the board to throw the bags back to the firing team as soon as possible
 - Teams will have a prescribed time limit to take as many shots as they can and make adjustments to the catapult as they deem necessary
 - For safety reasons, the catapult may only be fired using the provided trigger mechanism, not by hand
 - Some assembly may be required, so basic knowledge of catapults would be beneficial to the team
