

Attention Faculty:

booknow+ is here!

Enhancing textbook selection and adoption process!

booknow+ for Instructors

Using booknow+, from within the campus Student Information System or Learning Management System, instructors can:

Discover

Built atop a powerful course materials engine, the discovery tool enables instructors to explore a new world of course materials content, augmenting the traditional textbook offerings with digital course materials, open educational resources (OER), videos and more. In addition, instructors are free to adopt any content they desire by inserting a link to the content in the FacultyDiscover tool. This content is then available for discovery and adoption by other instructors using booknow+.

Discuss

The booknow+ community informs the discovery process by enabling faculty to share critical feedback on course materials with their peers across the network, building a robust repository of reviews and recommendations.

Adopt

This unique discovery and collaboration tool also empowers instructors to adopt the course materials - in whatever format - that best fit their pedagogical goals. Adoptions automatically flow to the campus store, eliminating paperwork and guesswork associated with submitting traditional adoptions.

booknow+ for Students

Using booknow+, from within the campus Student Information System or Learning Management System, students can:

Discover

At the point of registration and throughout the term, students can quickly and easily find all their required and recommended course materials.

Obtain

Connect to the campus store website to purchase or rent all required and recommended course materials.

Access

Coming soon: By automatically placing links to all digital content within the LMS, booknow+ will allow students to instantly access their digital course materials with the ease and convenience of single sign on.
