

Subject: ITS Java Upgrades: Mar 18-25
Dear Faculty and Staff,

ITS will be installing an important Java upgrade on all ODU workstations over the next two weeks. This upgrade is critical to maintaining a secure computing environment on campus and protecting your data.

The upgrade will install quietly in the background while your machine is on. Your TSP will send out a formal notification letting you know when your upgrade will take place.

After the upgrade, you may see a security warning appear when you navigate to some web pages (see image below.) Do not be concerned when this message appears; if you are at a website that you trust, please click “Run” to allow the Java program to load.

For any questions please send email to itshelp@odu.edu
