

The Department of Chemistry and Biochemistry

Seminar Series

Presents a Seminar Titled:

“Diverse Peptide Libraries and Protein-Protein Interaction Inhibitors”

Presented By

Dr. Matthew C. T. Hartman

Associate Professor

Biological/Biophysical, Organic

Virginia Commonwealth University

The development of inhibitors of protein-protein interactions has consistently been a challenge for drug discovery. During this presentation, I will discuss two challenging targets that involve DNA repair protein complexes and our progress towards development of potent inhibitors of these interactions.
