

# MARKET BRIDGE CHALLENGE Scavenger Hackathon 2016

HOSTED BY

**GOV2COM**

You are invited to participate in a fun hack challenge that will pit your hacking skills against a new cyber-protection system.

The challenge goes live on March 29, 2016 at the Market Bridge Challenge Information Session

Register at <http://market-bridge-challenge.eventbrite.com>

## THE STORY

You and your team get to hack a company. The target is a small business with a fairly normal set-up. A few employees, a network, a website, a few services such as Email, DNS and the like (you'll have to figure this out) etc. The employees have the usual stuff, personal computers, corporate computers, company and private emails, social media accounts, smartphones and tablets etc. and the small-business is also part of a bigger supply-chain and potentially sells its products and services to larger vendors.

Rumor has it that Iron Goat Inc. has a contract to work on some classified project for some US defense organization, you don't quite know which. You really would like to get your hands on whatever it is and see if you can make some extra cash by selling it on the darkweb market...

## THE GAME

The game is set up as a scavenger hunt hackathon with life-like targets. Your aim is to gain access to the company's network, gain regular access or gain root access to their systems and try to get as much of their trade secrets, client data, or other sensitive information that you can. You gain points for every evasion successfully executed, and for every secret successfully extracted. You lose points for getting detected.

## THE TEAMS

A team must contain at least one government contractor. Winner receives an invitation to become Trustifier Solutions Partner, fees waived.

## NO RULES
