

COVA CCI CybER Con

Bridging the Academy-Industry Gap through Experiential Learning

The COVA CCI National Cybersecurity Education & Research Conference builds synergies between the academy and industry through a focus on experiential learning research and practice in cybersecurity. We welcome researchers, professors/instructors, industry professionals, students, and government professionals from all racial, ethnic, gender, religious, sexual orientation, and cultural backgrounds; disabled and nondisabled; veterans; career changers—anyone with an interest in cyber-related experiential learning opportunities. There are a number of underrepresented groups and perspectives in cybersecurity, and we are creating a space where everyone can share, learn, and connect around experiential learning in cybersecurity.
