

1. **Accessing through an auto-provision email?**

- BryteWave (RedShelf) will be provisioned to the student's academic email address. This will create an account for the student that they can log into on the BryteWave login and find the preloaded material.
- The login URL for [BryteWave](https://brytewave.redshelf.com/) is now located at: <https://brytewave.redshelf.com/>
- While they can get in at the URL, they may have to request a password change if they don't follow the activation link that was emailed to them. So, all ACCESS provisioned students will receive an email that looks like [this sample](#). If the student clicks the link in the email, it will pass them into their BryteWave shelf (which is the same as if they logged in at the login URL) and will be able to complete an account set up. (set password, etc.)

2. **Accessing through the course in the campus Learning Management System (LMS)?**

- If the RedShelf LTI has been installed on campus, and the professor has added the RedShelf BryteWave link in their LMS, then that link will also send the student into their BryteWave account / shelf. If they haven't created an account at this time, they would need to complete their BryteWave account setup. If they follow the link after order release has provisioned the material, that student's books should be on their shelf.

3. **Accessing through Follett Discover Access?**

- A student can also get to the bookshelf by clicking the link in Follett Discover Access for BryteWave. This link acts just like the LTI link and will pass that student into their BryteWave Shelf.

**Note:** Overall, the student (once provisioned) will have the book on their shelf, and will just need to get to the BryteWave shelf to log in or get passed into it from one of the links mentioned above and then they have access.
