Installing GlobalProtect

1. Go to odu.edu/ts/software-services/vpnclient. Click GET VPN SOFTWARE under the Windows heading (select 32 or 64 bit, depending on your computer). The software will download after you log in with your MIDAS ID and password.

2. Run the installer, and go through the prompts to install the software. (If prompted, enter credentials for a user with administrative rights to the computer.)
3. After the installer has finished, hit Close to complete the installation.

Connecting to the ODU VPN

1. In the Windows system tray, in the lower right corner of your screen, click on the GlobalProtect icon to display the connection window.

2. Enter vpn.odu.edu into the box, and hit Connect.
3. A Monarch-Key login page will appear in a pop-up window. Enter your MIDAS ID and password to log in.

4. If you are enrolled in two-factor authentication, you will also need to authenticate with your second factor. Request a push or enter a code.
5. Once connected, another pop-up window will appear as confirmation.
